Introduction

INTRODUCTION: BLAH BLAH

Text Text Text Text.

You can change the size of the footnote text like Text¹ Text² Text³

- ◇ Text,
- ◇ Text,
- ◇ Text.

An equation without number could be represented by:

$$c^2 = a^2 + b^2$$

That's all for this slide.

¹ here.

²And here.

³And here.

INTRODUCTION: BLAH BLAH

- **Energy dissipation** (excluding frictional heat): assumed to occur near the rupture tip.
- **Key Question:** Does dissipation localize in natural faults despite complexities (e.g., inelasticity, off-fault damage)?
- **Implications:** Applicability of LEFM depends on maintaining a separation of scales.

A key question is if energy dissipation (aside from frictional heat) on natural faults with all its complexities (e.g., weakening, off-fault inelasticity) truly is localized in the vicinity of the rupture tip.

THIS IS OTHER TYPE OF SLIDE

**There is some text here. And an equation
with number:**

$$E^2 = m^2 + p^2 \quad (1)$$

INCLUDE A FIGURE

Something about the fig.

A movie poster for 'The Grand Budapest Hotel' showing a large, ornate pink hotel building with a central tower, set against a backdrop of mountains and a cloudy sky. A small figure of a person is visible on the left side of the poster.
